

Turbine Power 2000

Peabody Hotel, Orlando Florida

1:00-5:00 pm

November 13, 2000

An open forum to discuss direction and R&D needs for NETL Future Turbine Power Programs.

The National Energy Technology Laboratory (NETL), on behalf of DOE-FE, is developing a strategy for future gas turbine programs that address technology, market, and environmental issues for the 21st Century. NETL is interested in hearing the concerns of the power industry.

Current planning efforts focus on the future program elements of sensors/controls/health monitoring (SCH) and Gas Turbine Power Plant Life Cycle Management (LCM). The NETL would very much like to have your input into the development of the strategy for these program elements.

Review the Next Generation Turbine Program Plan and the Turbine User Needs Assessment at our website and then register for the workshop. Let's build a turbine program together.

**Registration information can be found
at our website: www.netl.doe.gov**

If you have any questions about the forum, please contact
Abbie Layne, DOE-NETL Advanced Turbine Systems Product
Manager at 304-285-4603 or abbie.layne@netl.doe.gov.
